Možnosti náterov - **ALKYTON** kladivkový kryje v 1 vrstve v celom spektre dodávaných odtieňov. Účinné antikorózne pigmenty vytvárajú dlhodobú antikoróznú ochranu. Výrobok má veľmi dobrú príľnavosť aj na skorodovaný povrch po ručnom očistení (farba na hrdzu). Použité rozpúšťadlá dodávajú výrobku vynikajúcu zlievateľnosť – pri aplikácii štetcom možno dosiahnuť vzhľad podobnej kvality ako pri striekaní. Modifikácia alkydových živíc uretánmi dodáva výrobku dlhodobú farebnú stálosť a podstatne predlžuje lesk.

Dodanie a montáž.
